27 Jun – 28 Sep 2026

Overview

Groww compares well with its rivals. One moment stands out: after the late-August update, **41 of 471 low ratings in three weeks** mentioned the chart screen hiding phone navigation, or the new Scalper switch sitting where the back gesture is. Mentions faded by mid-September, so it may already be addressed.

1★–2★ reviews mentioning chart navigation or the Scalper switch, by week

Groww reviews on Google Play. Weeks start on the date shown.

Mostly app versions 18.16.0 and 18.16.1.

18.9% vs 28.7%

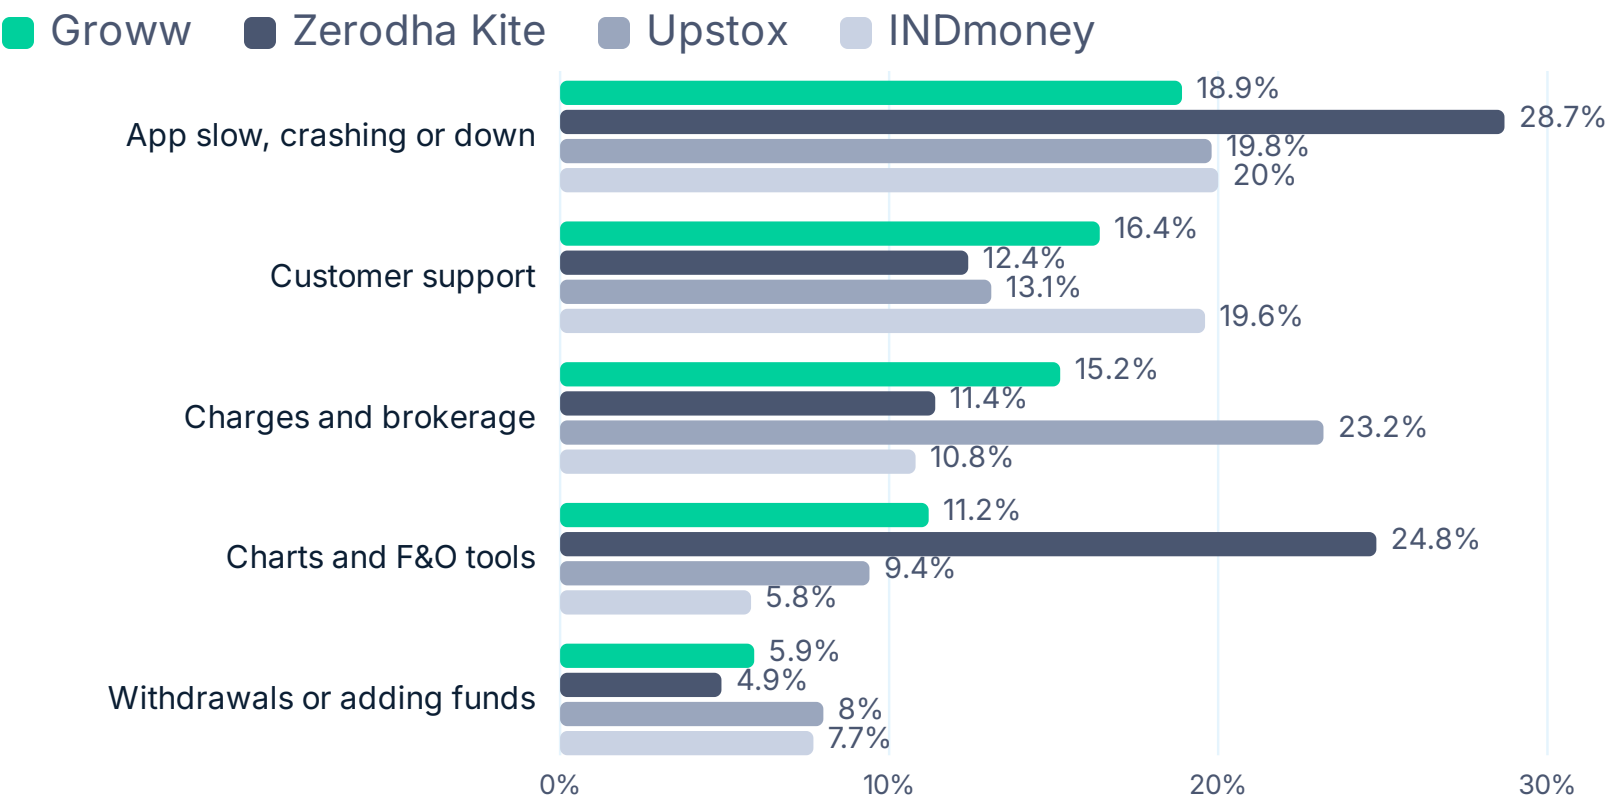

of complaints are about speed or crashes: Groww vs Zerodha Kite, Jun–Sep 2026

Source: public Google Play reviews in English, pulled 29 Sep 2026. Complaints (1★–2★) sorted by keyword rules, spot-checked by hand.

What the reviews show

What complaints are about, four investing apps

1★–2★ reviews, 27 Jun – 28 Sep 2026. Groww 1,739, Zerodha Kite 387, Upstox 616, INDmoney 260 complaints.

“On viewing the chart, the bottom navigation buttons are hidden automatically even though the navigation buttons are fixed in my phone settings”

★ ★ ★ ★ ★ Groww user · 2026-08-28

“whenever I hit back from a chart, it accidentally triggers scalping. Not everyone is a scalper!”

★ ★ ★ ★ ★ Groww user · 2026-08-29

“Please bring scalping mode or otherwise Trailing SL and Target setup for commodity MCX market like gold, silver, crude oil and NG”

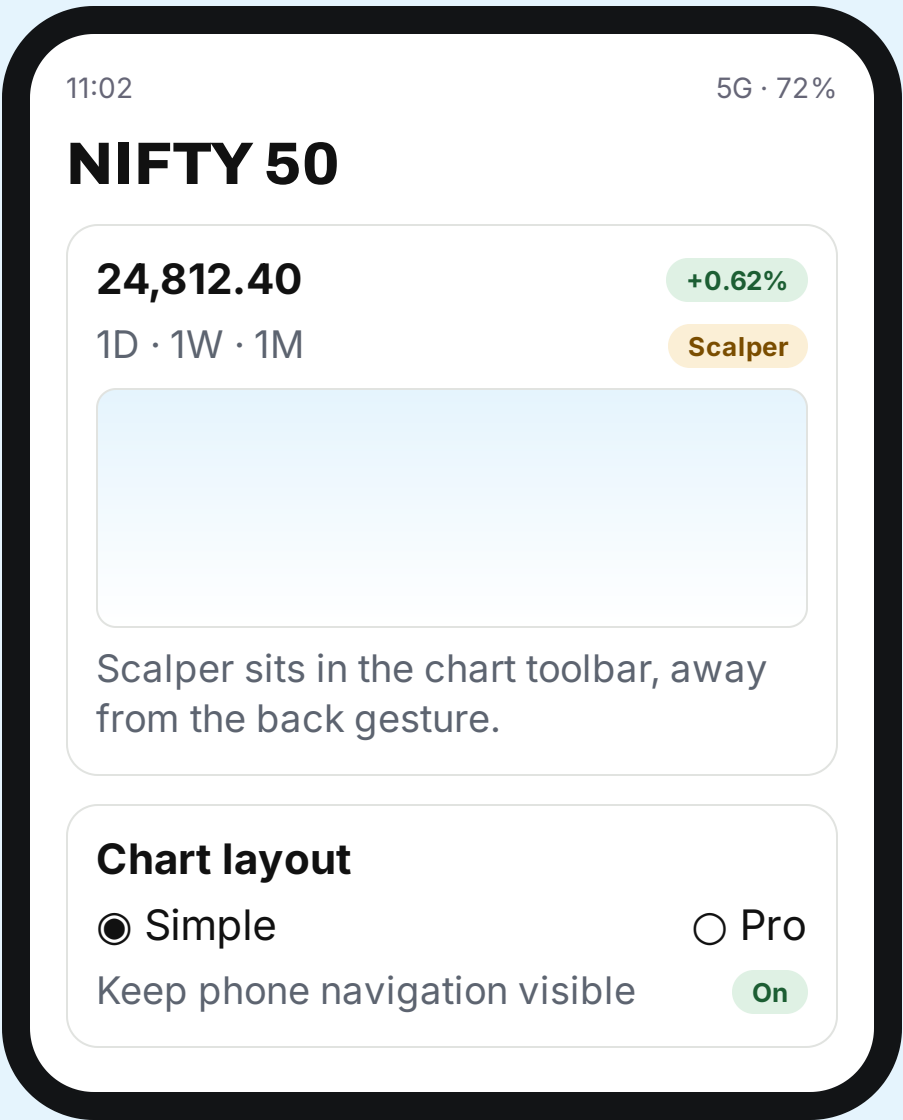

★ ★ ★ ★ ★ Groww user · 2026-09-26

The feature itself is wanted: traders are asking for Scalper in commodities too. The friction came from where it sat.

Keep the power, protect the everyday path

- 1 Nothing tappable in the gesture zone:** keep mode switches like Scalper out of the bottom strip where phones put back and home gestures; move it to the chart toolbar.
- 2 A setting to keep phone navigation visible on charts,** on by default for users who have it fixed in their phone settings.
- 3 Simple and Pro chart layouts:** long-term investors get a clean chart, active traders get Scalper and advanced tools, with a one-tap switch.
- 4 Staged rollout for trading screens:** 5% → 25% → 100%, pausing automatically if accidental mode entries or low ratings mentioning the change rise.

I can't see Groww's internal data, so treat these as starting points for a team that already ships fast.

How I'd know it worked Accidental Scalper entries per 1,000 chart opens (opened and closed within 3 seconds), tracked for every release.
