

Product Teardown

New User Onboarding

Apratim Saxena | C-45

Overview

Founded in 2012 (as Integromat, rebranded 2022), Make is a visual-first, no-code automation platform that lets anyone design, build, and automate workflows across thousands of apps without writing a single line of code. Owned by Celonis, Make's mission is to empower everyone to automate without limits.

Values

1

Visual first
See automation,
don't just run it

2

Empower without limits
No-code access
for everyone

3

Community-led growth
30K+ makers
sharing knowledge

4

AI + Automation together
Agents that
think and adapt

User Persona

The Solo Hustler

26 y/o · Freelance Digital Marketer
Mumbai, India · He/Him

About

Runs 2–3 client projects simultaneously,
drowning in repetitive tasks. Discovered
Make.com via YouTube — skeptical but curious.

Needs

- Automate at least one client workflow this week
- Zero cost until real value is proven
- Fast setup — no patience for long onboarding

Pain Points

- Jargon like "scenarios" feels alienating upfront
- Mobile app is unusable — desktop only
- Unsure if 1,000 free credits will be enough

The Ops Lead

31 y/o · Operations Manager, SaaS Startup
Bangalore, India · She/Her

About

Tasked with cutting manual ops work by 40%.
Has evaluated Zapier and n8n before. Needs
something her whole team can eventually use.

Needs

- Evaluate Make.com's depth within one week
- Build Slack + Gmail + Airtable multi-step scenario
- Demo visual builder to get stakeholder buy-in

Pain Points

- Complexity is a barrier for non-tech teammates
- Broken mobile app is a dealbreaker for remote work
- Subscription cancellation flow feels risky and broken

User Journey Map

From Sign-Up to Automation: The Make.com User Journey

A new user lands on Make.com, chooses their preferred sign-up method, fills in basic details, verifies their email, and completes a quick skillset quiz; all before reaching the dashboard with 1,000 free credits ready to build their first automated scenario.

User Journey Map

Step-01

Make.com's landing page — clean, confident, and straight to the point. The hero headline communicates the core value instantly, with two clear CTAs and trust signals ("No credit card required") right below.

Step-02

Make.com's sign-up page minimal form, Choose how to sign up via Google, another social account, or the classic email + password route. Select your hosting region and country, then hit Sign up for FREE.

User Journey Map

Step-03

Make.com's onboarding quiz, right after sign-up, users are asked about their technical skill level. A smart personalisation step that tailors the experience from the very first moment.

Step-04

Make.com's dashboard everything in one place from the get-go. 1,000 free credits, suggested apps, trending AI agents, and a "Create scenario" button front and centre — built to get users automating immediately.

User Experience

★★★★★ October 13, 2024

Incredible tool for one-man band.

★★★★★ January 15, 2019

Better than IFTTT

★★★★★ June 30, 2017

Much better than zapier for what I need. Awesome work guys.

The GOOD

The sign-up process is quick and to-the-point — email or social login, done in seconds. Make.com offers 1,000 free credits with no credit card required and no time limit, letting users explore and build real automations right away without any commitment.

Listed PROs

- More affordable than Zapier with greater flexibility
- Better automation depth than IFTTT — not even comparable
- Amazing features for solo operators / one-man bands
- Works seamlessly on both phone and PC
- Intuitive enough for non-coders to get started quickly

Suggested apps

Choose an app to explore more resources and start automating!

Make AI Agents

Make AI Tools

OpenAI

Gmail

Sales Outreach Agent

Automatically research new leads and draft personalized email replies. It checks your 7-day availability to propose meeting times, ensuring your sales team never misses a high-value opportunity.

+ Use this scenario

User Experience

The POOR

The mobile app is Make.com's weakest point — QR code-only login confuses most users with zero guidance, push notifications break silently, and the app can't build or edit scenarios at all, making it feel like an afterthought.

Listed PAIN-POINTS

- More affordable than Zapier with greater flexibility
- Better automation depth than IFTTT — not even comparable
- Amazing features for solo operators / one-man bands
- Works seamlessly on both phone and PC
- Intuitive enough for non-coders to get started quickly

★★★★★ Sep 27, 2024

Push notifications not working on my Android devices for months despite successful triggers.

It's good when it works, but push notifications have been failing on my Android devices for months now.

★★★★★ June 11, 2023

Overall, not impressed. I wanted to like this app after finding out how badly IFTTT nerfed its own app, but I cannot get the QR code to scan (or the code to work if entered manually) in order for me to add my the USA, you're out of luck. If the devs know why I can't add my device or if they have a workaround, I'd love to hear it. Otherwise, it's gonna be a no from me.

Metrics

Number of users who sign up and successfully run their first automated scenario

North-Star Metric

How many signed-up users actually activate a scenario or use a template in their first session

L1 Metric

How many visitors leave the landing page without ever clicking "Get started free"

L2 Metric

Analysis and Recommendation

- No "try before you sign up" option exists — a sandbox or demo scenario could significantly reduce drop-off at the top of the funnel.
- The skillset quiz personalises nothing visibly — all users land on the same dashboard regardless of their answer. Beginners should see templates, advanced users should land closer to the scenario builder.
- The mobile app's QR code login has zero in-app guidance. One contextual line — "find this code under Devices on your dashboard" — would eliminate the most common reason users uninstall instantly.
- "1,000 free credits" sounds generous but is never quantified during onboarding. A simple example like "one scenario run = 1 credit" would make the free tier feel concrete rather than vague.
