PROFESSIONAL EXPERIENCE

WisdomCircle | Product Intern

May 2026 - Jul 2026

Supported product leadership at an early-stage two-sided marketplace, owning the weekly analysis cadence for 20+ shipped features across 6 monthly release cycles.

- Delivered weekly recommendations to the Product Lead across 4 core product surfaces, translating adoption, completion, and drop-off data into a structured Scale/Iterate/Monitor decision framework
- Diagnosed root causes behind flat feature adoption using SQL and session-level behavioural analysis, isolating device-specific friction that aggregate completion metrics had concealed
- Worked cross-functionally with product, engineering, and quality assurance on release readiness, testing builds against a 2,000+ case regression suite and documenting defects for resolution
- Standardised reporting and issue-tracking documentation, converting ad-hoc analysis into a repeatable weekly operating rhythm

Hashmint | Operations Intern

Aug 2025 - Oct 2025

Owned end-to-end client acquisition for the India 1000 Scholars Olympiad across 3 cities, from market mapping and cold pipeline build through closed revenue.

- Generated Rs. 2L+ in revenue across 80+ institutional clients in Kota, Jaipur, and Dehradun, owning the engagement cycle from prospecting to close
- Presented directly to directors and owners across 30+ on-site client meetings, securing enterprise-level conversations with Allen and Unacademy
- Built the client relationship management system and follow-up cadence from scratch, tracking 80+ accounts with no existing process to inherit
- Synthesised field-level client objections into localised go-to-market frameworks with sales and operations, adapting positioning market by market

Manoshakti, Emotional Well-Being Club | Secretary

Aug 2023 - Jun 2025

Led a 2-year term as Secretary, owning programme execution, budget management, and senior-stakeholder approvals across a student team.

- Secured institutional sign-off for campus-wide programmes by presenting structured business cases to CXOs and senior university administration, clearing the approvals bottleneck that capped programme scale
- Managed Rs. 35,000+ in budgets across logistics, procurement, and compliance, delivering programmes reaching 10,000+ cumulative attendees
- Established documentation and process standards, mentoring junior members so delivery quality held across annual leadership handovers

HNP+ Organisation | Data Intern

Jun 2024 - Jul 2024

Supported a public-health outreach programme on data operations and government liaison, working across District Magistrate offices and multiple field sites.

- Liaised with District Magistrate offices and Government of India departments to source the scheme records required for field outreach, navigating public-sector processes to secure data release
- Managed registration, entry, and tracking workflows for 1,000+ confidential beneficiary records across multiple field locations under prescribed data-privacy protocols
- Analysed field-collected data to identify enrollment gaps in healthcare-scheme coverage, directing where outreach effort was allocated

SELECTED PROJECTS & CASE STUDIES

10-Minute Food Delivery in India | Market & Strategy Analysis

Aug 2026

Analysed why Zomato failed 3 times at 10-minute food delivery while Swiggy scaled Bolt to 1 in 10 orders.

- Built an evidence base of 50+ dated events across 4 market attempts and 2 platforms from shareholder letters, earnings calls, and press records, graded by source reliability
- Benchmarked competing operating models on inventory risk, capital expenditure, and demand-forecast sensitivity to isolate the structural difference in downside exposure
- Concluded the binding constraint was restaurant supply rather than consumer demand, stress-testing 3 pivotal decisions only against evidence available at each decision date
- Issued a dated, falsifiable view on the January 2026 regulatory directive, naming the indicators that would invalidate the recommendation

Consumer Complaint Analysis, Indian Job Platforms | Data & Insight

Aug 2026

Analysed 421k user reviews across 7 competing platforms to test whether fraud complaints track product releases or business model.

- Constructed the dataset from scratch: 421k reviews across 7 competitors, with 4 years of release history reconstructed from public metadata and validated to within a week
- Designed an 11-category complaint taxonomy, validated it against 310 hand-labelled records, then classified 30,000 complaints and reported per-category accuracy rather than assuming it
- Found no release-driven effect across 4 years of updates, isolating monetisation model as the structural driver: free platforms carried 3x the fraud complaints of the paid platform
- Translated the finding into 3 prioritised interventions, each mapped against the marketplace supply constraint blocking it

Defect-to-Decision Operating Model | Process Redesign

Jul 2026

Redesigned how a product organisation converts quality-assurance output into prioritisation signal, built from friction observed running QA on a 2,000+ case suite.

- Mapped the existing defect-to-decision process across quality assurance, engineering, and product, isolating the handoff where reproducible data stopped being used
- Redesigned data capture to move root-cause classification to the point of resolution, so downstream analysis ran on recorded cause rather than inferred category
- Delivered requirements documentation, data model, process flows, and a prototype reporting view, with explicit scope exclusions to hold implementation to a single workflow

SKILLS & COURSEWORK

Consulting	Problem Structuring, Hypothesis-Driven Analysis, Market & Competitive Research, Business Case Development, Financial Statement Analysis, Risk Assessment, Internal Controls, Stakeholder Management, Client Communication, Process Mapping, Requirements Gathering, Executive Reporting
Analytics	SQL, Data Analysis, Metrics Definition (North Star, L1/L2), Funnel & Cohort Analysis, Experiment Design & A/B Testing, Data Validation & Quality Controls, Dashboarding, Root-Cause Analysis
Technology	Python (pandas), SQL, Cloud Computing (AWS), System Design, REST APIs, DBMS, Large Language Model Applications, Prompt Engineering, Agile & Scrum
Tools	Excel, PowerPoint, Metabase, Fullstory, Jira, Notion, Figma, Whimsical, GitHub, Google Workspace
Domains	Marketplaces & Consumer Internet, Quick Commerce, EdTech, Public Sector & Healthcare Outreach

CERTIFICATIONS & EDUCATION

Product Manager Fellowship | NextLeap (Graduated Top Fellow)

Jan 2026 - May 2026

Virtual Job Simulations | BCG (Strategy Consulting), Deloitte (Data Analytics), Goldman Sachs (Risk, Internal Audit)

Forage, 2025

B.Tech, Computer Science (Cloud Computing & Virtualisation Technology)

2027 (Available for roles from Jan 2027)
