PROFESSIONAL EXPERIENCE

WisdomCircle | Product Intern

May 2026 - Jul 2026

Owned the measurement and release-quality layer for 20+ shipped stories across 6 monthly release cycles, working directly with engineering on instrumentation and defect triage.

- Wrote and validated SQL queries in Metabase against production tables to measure adoption, completion, and drop-off across 4 core product surfaces spanning recruiter onboarding, team invites, application flows, and role visibility
- Built Fullstory session segments on data-test IDs to analyse session-level behaviour, isolating device-specific abandonment that aggregate completion-rate metrics had concealed
- Executed release-readiness testing against a 2,000+ case regression suite, logging reproducible defects with reproduction steps and expected-versus-actual behaviour for engineering triage
- Standardised feature reporting and defect documentation in Notion, turning ad-hoc analysis into a repeatable weekly workflow for the product team

Hashmint | Operations Intern

Aug 2025 - Oct 2025

Owned end-to-end business-to-business outreach for the India 1000 Scholars Olympiad across 3 cities, from cold pipeline build through closed registration revenue.

- Drove Rs. 2L+ in registration revenue across 80+ schools and coaching institutes in Kota, Jaipur, and Dehradun, owning the full sales cycle from cold outreach to close
- Pitched directly to directors and owners across 30+ on-ground institutional visits, opening enterprise-level conversations with Allen and Unacademy
- Built the outreach CRM and follow-up cadence from scratch, tracking 80+ accounts across calls, email, and WhatsApp with no existing process to inherit
- Partnered with sales and operations to convert field-level objections into localised engagement frameworks, adapting positioning city by city

Manoshakti, Emotional Well-Being Club | Secretary

Aug 2023 - Jun 2025

Led the club for 2 years, owning event execution, budgets, and university-level approvals across a student team.

- Secured administrative sign-off for campus-wide events by presenting structured proposals to CXOs and senior university administration, clearing the approvals bottleneck that capped event scale
- Managed Rs. 35,000+ in budgets across logistics, resource allocation, and compliance, delivering events reaching 10,000+ cumulative student footfall
- Built documentation and process standards for the club, mentoring junior members so execution quality held across annual handovers rather than resetting each cycle

PROJECTS

Play Store Review Intelligence | Product Analytics

Aug 2026

Mined 421k Play Store reviews across 7 Indian job platforms and found fraud complaints track monetisation model, not product releases.

- Built the dataset end-to-end: scraped 421k reviews across 7 apps and reconstructed 4 years of release history from review metadata alone, validated to within a week using one app's encoded version strings
- Hand-labelled 310 reviews as ground truth for an 11-category classification scheme, then classified 30,000 complaints through a Python and large language model pipeline
- Scored the classifier against those labels and reported per-category accuracy rather than assuming the model was correct
- Reported a null result on release attribution across 4 years of updates, isolating monetisation model as the real driver: free platforms carried 3x the fraud complaints of the one that charges jobseekers

QA Signal Loop | Product Design

Jul 2026

Designed a system turning defect logs into product prioritisation signal, built from friction observed running QA on a 2,000+ case suite.

- Mapped the defect-to-decision path across QA, engineering, and product, isolating where reproducible defect data stopped being read once the fix shipped
- Redesigned data capture to move component and root-cause fields off the tester and onto the engineer at close, so clustering ran on recorded cause rather than guessed classification
- Delivered PRD, data model, user flows, and prototype for the product manager digest view, deliberately excluding test authoring, continuous integration, and historical backfill to hold scope to a single input-to-signal path

Anthropic Claude GroundWork | End-to-End Product

Apr - May 2026

Designed a workflow guidance layer letting Claude declare its execution approach before responding to complex tasks.

- Ran 51 primary research inputs (4 user interviews, 47 survey responses), finding users abandoned complex AI tasks over approach opacity rather than output quality
- Designed a pre-response declaration layer with contextual Skill recommendations, and defined a 3-tier metric tree spanning Skill adoption rate, approach confirmation rate, and session return behaviour
- Built a monetisation and experimentation framework linking feature adoption to retention and paid-plan conversion, scoping side-by-side response comparison as the primary activation lever

SKILLS & COURSEWORK

AI	Large Language Model Applications, Prompt Engineering, Eval Design, LLM-as-Judge, Retrieval-Augmented Generation (RAG), AI Agents & Tool Use, Text Classification Pipelines
Technical	Python (pandas), SQL, System Design, REST APIs & Microservices, DBMS, AWS, Containers & Kubernetes, Distributed Systems, Git
Analytics	SQL, Metrics Definition (North Star, L1/L2), Funnel & Drop-off Analysis, Retention & Cohort Analysis, Session Analysis, Event Tracking & Instrumentation, Experiment Design & A/B Testing, Dashboarding
Product	Product Strategy, User Research, Problem Framing, Requirements Gathering, User Stories & Acceptance Criteria, PRD Writing, Prioritisation (RICE), Roadmapping, Backlog Management, Journey Mapping, Agile & Scrum, Stakeholder Management
Tools	Metabase, Fullstory, Figma, Whimsical, Jira, Notion, GitHub, Excel, Google Sheets

CERTIFICATIONS & EDUCATION

Product Manager Fellowship | NextLeap (Graduated Top Fellow)

Jan 2026 - May 2026

B.Tech, Computer Science (Cloud Computing & Virtualisation Technology)

2027 (Available for roles from Jan 2027)
