PRODUCT PROPOSAL · CHATGPT MOBILE, INDIA

Academic Voice Mode

Helping Indian students speak their doubts to ChatGPT without feeling rushed.

Voice is already how India uses the phone. ChatGPT's voice has not caught up yet.

535.8M

WhatsApp users in India, where voice notes are an everyday way to talk

~82%

of mobile users use voice features, so comfort with voice is not the issue

~270%

yearly growth in voice search, led by rural and semi-urban India

WHY VOICE FITS INDIA

- Less need for English or accurate typing
- Speaking is faster than typing on a phone
- Handles accents and dialects better than exact spelling
- Feels natural in a culture built on talking

THE GAP INSIDE CHATGPT

14–17M weekly ChatGPT users in India

~10% of them use voice input

The feature is available. People are not using it.

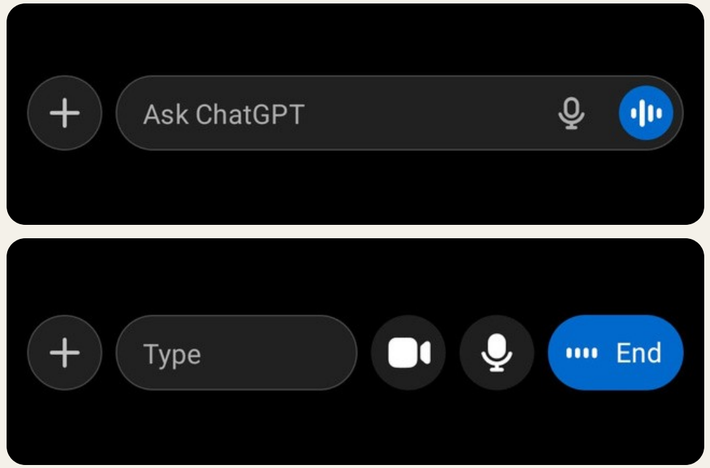

Counterpoint, IAMAI, IBEF, Google India, DemandSage voice search stats, Huddle Creative voice trends

ChatGPT has two voice tools. People use voice where it fits the job, and ChatGPT is a creation job.

VOICE IN CHATGPT TODAY

Voice Mode is a two-way, hands-free conversation. It is harder to find.

Voice Dictation turns speech into text. It sits beside the text bar, so it is easier to find.

APP	VOICE IS USED FOR	WHY IT WORKS THERE
WhatsApp	Voice notes	Record privately, send later. Tone comes through. No typing in complex scripts.
Google Assistant	Commands	Trusted for actions like calls and alarms. Handles Indian accents well.
YouTube	Search	Say a keyword. Even partial queries return useful results.
ChatGPT	Creating essays, code, emails	Answers must be text to copy. Shared places make speaking awkward. Hinglish technical terms slip, so people go back to typing.

WHAT REVIEWS REPORT

Voice cuts off or fails to load · It interrupts before a thought is finished · A hidden 3-minute limit with no timer can lose a long recording · Read Aloud is often broken

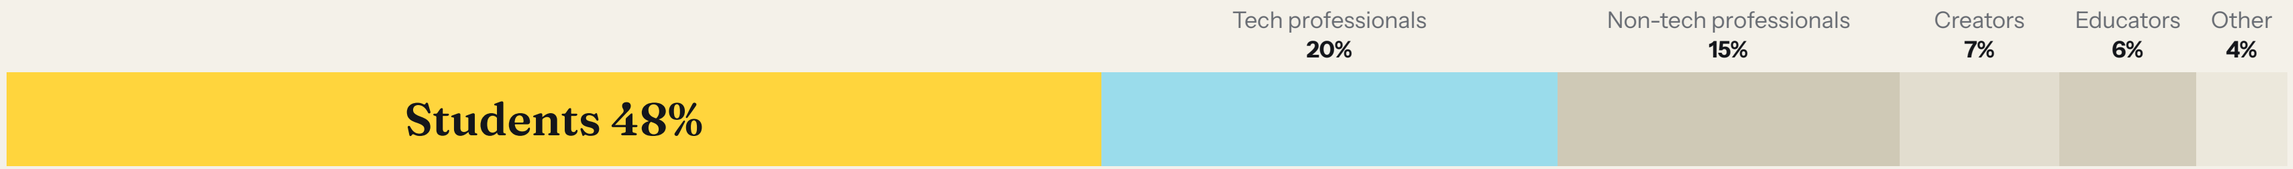

WHAT FIXING IT UNLOCKS

Reach: Hinglish and accent support for users who struggle to type · **Trust:** no lost recordings · **Daily use:** quieter voice that works on commutes and in offices

Reviews of ChatGPT voice features; competitor research from Milestone 01

Students are the largest group, and most have tried voice and gone back to typing.

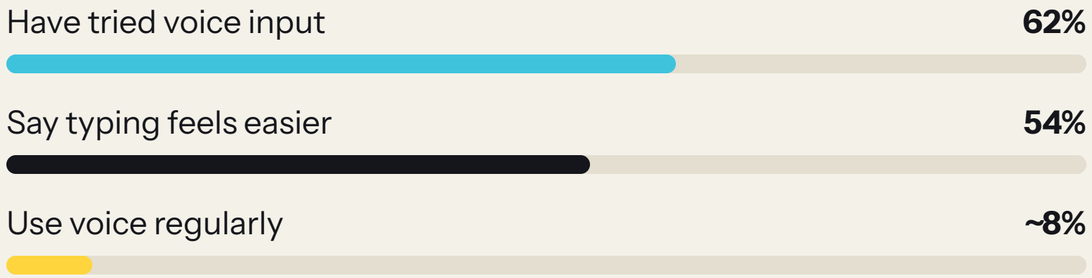

WHO USES CHATGPT ON MOBILE

WHY STUDENTS FIRST

- They use ChatGPT daily or several times a week, so small gains in voice add up
- Studying means follow-up questions, so voice can be reused
- They are forming habits that can carry into career prep

THE ADOPTION GAP

WHY THEY STOP, AS A SHARE OF RESPONSES

25%
Hard to structure thoughts

16.7%
Background noise

12.5%
Feel rushed while speaking

8.3%
Words get misunderstood

Segment split: Mary Meeker AI Trends and OpenAI usage data (early 2026). Student survey is small, about two dozen responses: read it as direction, not proof.

THE PROBLEM

Students try voice, then go back to typing. Speaking makes it hard to think, edit and structure an academic question, and it feels rushed in shared spaces.

OUR HYPOTHESES

1. Voice does not let them pause, edit and structure thoughts while thinking.

2. Typing feels faster and more efficient for academic queries.

3. Voice seems wrong for complex, multi-step learning questions.

WHO HAS IT

Indian college and university students, 18–24. Mobile-first. They use ChatGPT often to study, understand concepts and clear doubts.

HOW WE KNOW

62% have tried voice, only **~8%** use it regularly.

54% say typing feels easier.

They describe voice as rushed, hard to edit, awkward in shared spaces.

VALUE OF SOLVING IT

For students: ask complex questions without feeling rushed, and understand concepts better.

For ChatGPT: more engagement in its largest segment, and a stronger repeat habit.

WHY NOW

Students already use ChatGPT often, and about 82% of mobile users are comfortable with voice features. The gap is about fit, not comfort.

Segment split: Mary Meeker AI Trends and OpenAI usage data (early 2026). Student survey is small, about two dozen responses: read it as direction, not proof.

Academic Voice Mode turns speaking into drafting: speak first, then review, edit and choose the answer.

Speak
Say the full doubt, with pause and resume

Review
Read the live transcript

Edit
Fix it before anything is sent

Structure
Tap Structure My Doubt

Pick a format
Explain, step by step, exam prep

Generate
Get a text-first answer

WHO IT IS FOR

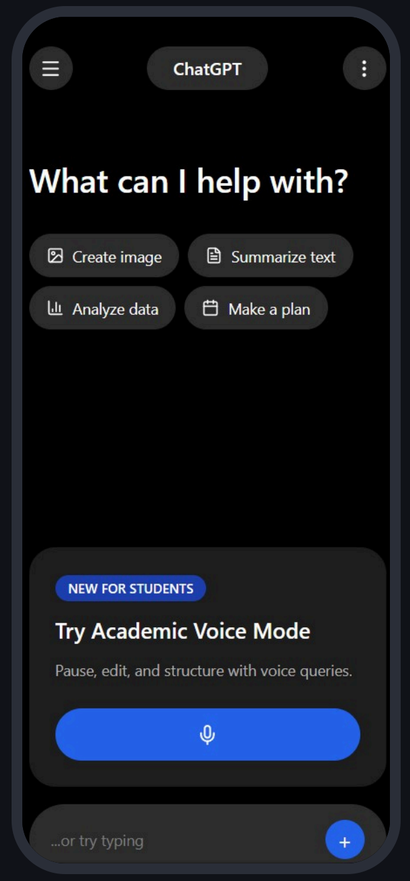

Xyz, 20, engineering student in a shared hostel. Asks multi-step doubts and edits queries before sending.

Today she cannot pause and rethink, cannot control the structure of the answer, and voice feels like a live chat, not drafting.

KEY FEATURES AND WHAT THEY GIVE STUDENTS

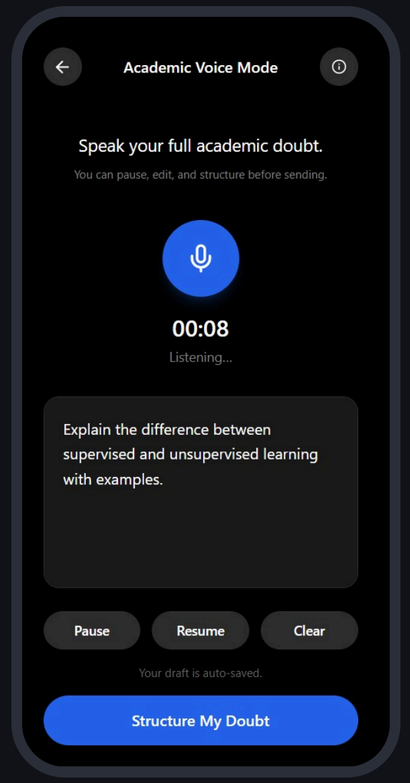

- **Pause and resume.** Time to think without feeling rushed
- **Visible recording timer.** No surprise cut-offs
- **Structure My Doubt.** Choose how the answer is formatted
- **Text-first answer.** Easy to read, copy and use, and private in public
- **Auto-saved draft.** Nothing lost if the session is interrupted

What the student sees

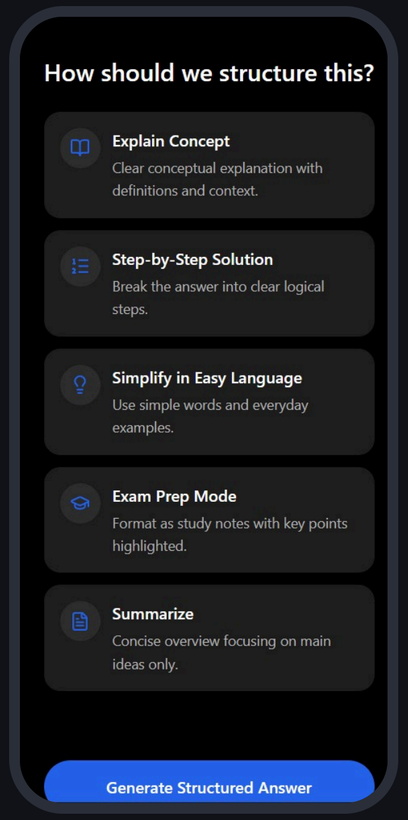

Discover

A "New for students" card on the home screen

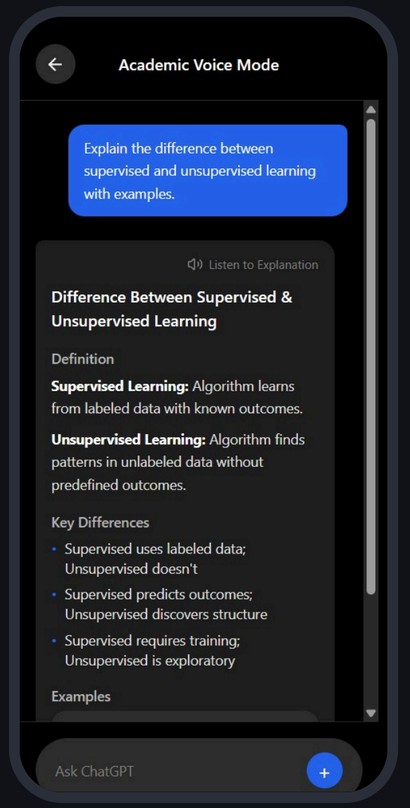

Speak

Timer, pause, resume and a live transcript. The draft auto-saves.

Structure

Explain, step by step, simplify, exam prep or summarise

Read

A text-first answer that is easy to copy

DECISIONS WE TOOK

- Students only, the largest segment
- Fix workflow control, not speech accuracy
- No gamification, to avoid distraction
- Text-first output, to reduce discomfort in public

Prototype snapshots. Concept design, not a ChatGPT release.

How we will know it works

1 More students use voice every week

HOW WE MEASURE IT

Share of student daily users who start at least one voice query in a week

2 More voice queries get finished

HOW WE MEASURE IT

Share of voice sessions that end in a successful submission

3 Students come back to voice

HOW WE MEASURE IT

Share of first-time Academic Voice users who use voice again within 7 days

Targets to be set after a baseline measurement.

NOT IN THIS VERSION

- Retraining the model for accents
- Offline voice processing
- Gamification or rewards
- A voice-only ChatGPT redesign
- An enterprise-focused solution

STATUS

In development. Launching on ChatGPT mobile in India for students.
